

Innovative.
Durable.
Hygienic.
Chemical Resistant.

TUFCEM™ Tiling Systems are durable, hygienic flooring systems designed for the most demanding food, beverage, and pharmaceutical processing environments. Available in a striking array of colors, impervious fully-vitrified TUFCEM tiles feature a choice of integrally molded slip-resistant surface textures in either traditional rectangle or contemporary hexagon format. A complementary range of coordinating tile accessories, chemically resistant adhesive and grout, and expansion joint materials completes the system.

- Maximizing contact between the bonding surfaces of the tile, adhesive, and substrate.
- Minimizing voids under the tiles that can lead to flexural cracking under loads.
- Leveling adjacent tiles to reduce lipped edges and minimize the risk of chipped tiles.
